

Research engineer or post doctoral position

14/06/2022

Post doctoral fellow or research engineer position available in Daniel Olive's lab for highly motivated candidates with a strong background in immuno-oncology.

Duration: 12 months

Location: [Immunomonitoring department](#), Paoli Calmettes Institute, Marseille, France.

Employer : Paoli Calmettes Institute

Summary

This project aims to map the expression of a therapeutic target present on myeloid (monocytes, mDC, M1, M2, pDCs, MDSC) and lymphoid populations (T cells, NK cells) in patients with acute myeloid leukemia by mass cytometry. We will also evaluate the prognostic value of this target. The results obtained will be crossed with different parameters (survival, progression-free survival, molecular analyses).

Main activities

The candidate will interact with different teams leading the different workpackages of the project. The overall scientific coordination of this interdisciplinary project will be ensured by [Pr. Daniel Olive](#) and Dr. Anne-Sophie Chretien. Data analysis will be supervised by [Dr. Samuel Granjeaud](#) (bioinformatics department, CRCM, Marseille). Successful candidates will have a strong background in immunology. Candidates with skills in mass cytometry or at least multiparametric flow cytometry are especially encouraged to apply.

Interested applicants should send their application by email to Anne-Sophie Chretien anne-sophie.chretien@inserm.fr with the following documents

- 1) Cover letter indicating current and future research interests, as well as a brief summary of your research experience
- 2) Curriculum vitae
- 3) Names and contact information for 3 references
